

Mulched Instantly!

4m high gorse...

To this...

Clearing this hillside at the back of Warkworth shows the steepness of the terrain and just how dense the gorse was. The final result is impressive when you consider that in a little more than a day we were able to make such a transformation. No matter how big or how small, 2 acres or 2000 acres, we can mulch any size gorse, all other noxious weeds and trees to below ground level while preserving native vegetation.

Using track grips fitted to our digger means our machinery can reach almost anywhere. The major difference is that the mulcher gives an instant result, the gorse is there one moment and gone the next. The mulch is able to rot down and put nutrients into the soil while stopping soil run off when it rains.

Our new Slashbuster Mulcher has arrived from the USA - View it now at www.slashbuster.co.nz

"Our business is built on our reputation, people trust us and building on that trust is very important to me personally" - Ken Borg.
